CAREER OBJECTIVE

Passionate ECE student with a strong interest in the software domain and hands-on skills in Python, IoT, and Embedded Systems. Seeking opportunities to apply programming and problem-solving abilities while gaining industry experience and contributing to innovative, technology-driven solutions.

WORK EXPERIENCE

Internet Of Things (IoT) • Internship — Jan 2026
Physitech Consultany Services Pvt Ltd, Hyderabad

Embedded Systems • Internship — Sep 2024 - Oct 2024
Ignite Embedded Systems, Hyderabad

EDUCATION

B.Tech, Electronics and Communication — 2023 - 2027
JB Institute Of Engineering And Technology

Senior Secondary (XII), Telangana State Board Of Intermediate Education — 2023
Science

Narayana Junior College, Kuntloor.

CGPA: 9.75/10

Secondary (X), Ssc — 2021
Ekashila E Techno Schools, Punnel, Warangal

CGPA: 10.00/10

TRAININGS / CERTIFICATIONS

Python
Aug 2025 - Present

udemy, Virtual

PROJECTS

Weather Monitoring System
Nov 2024

e Weather Monitoring System is designed using Arduino and Embedded C to measure and monitor environmental conditions in real time. The system uses sensors to collect weather parameters such as temperature, humidity, atmospheric pressure, and rainfall, depending on the sensor configuration. These sensors continuously sense environmental data and send it to the Arduino controller for processing.
The collected data is displayed on an output device such as an LCD or transmitted to a monitoring platform for analysis. This project provides accurate and real-time weather information, making it useful for applications in agriculture, weather forecasting, and environmental monitoring. The system is cost-effective, reliable, and suitable for small-scale weather observation stations.

EXPLORING WEARABLE IoT SOLUTIONS FOR PERSONALIZED HEALTHCARE SYSTEM USING AI
Jan 2026 - Present

This project develops a wearable IoT-based healthcare system for continuous and personalized health monitoring using AI. Wearable sensors collect real-time physiological data such as heart rate and activity, which is transmitted via IoT platforms for analysis. AI algorithms analyze the data to detect abnormalities and generate alerts, enabling early diagnosis, remote monitoring, and improved patient safety while reducing the need for frequent hospital visits.

SKILLS

- C Programming
- Python
- Arduino

- MATLAB
- Internet of Things (IoT)
- Embedded C
- Vivado
- HTML
- CSS
